Yes. For a **simple Bangladesh restaurant management system**, I would keep the SRS focused on the day-to-day operations of a small or medium restaurant. No online ordering, delivery tracking, loyalty points, advanced analytics, multi-branch management, AI, inventory forecasting, etc.

Below is a clean SRS structure you can use as your initial requirement document.

Software Requirements Specification (SRS)

Restaurant Management System

1. Introduction

1.1 Purpose

The purpose of this system is to provide a simple restaurant management solution for managing:

- Food/menu items
- Tables and customer orders
- Takeaway orders
- Point of Sale (POS)
- Kitchen orders
- Payments
- Daily income
- Purchases and expenses
- Sales and profit/loss reports

The system is intended for restaurants in Bangladesh where common payment methods include **Cash, bKash, Nagad, and Card**.

1.2 Scope

The system will help restaurant staff manage the complete basic sales process:

Menu → Order → Kitchen → Bill → Payment → Sales/Income → Expense → Profit/Loss

The system will be designed for a single restaurant/branch.

---

2. User Roles

The system will have simple role-based access.

2.1 Admin/Owner

The Admin can:

- Manage menu categories
- Add/edit/delete food items
- Set food prices
- Update stock status
- Manage tables
- View and manage orders
- View sales reports
- Record purchases
- Record expenses
- View income
- View profit/loss
- Manage users/staff

2.2 Cashier

The Cashier can:

- Create orders
- Select table or takeaway
- Add food items
- Change item quantities
- Apply discount
- Add VAT
- Receive payment
- Print bills
- View current orders

2.3 Kitchen Staff

Kitchen staff can:

- Receive confirmed orders
- View ordered food items
- View quantities
- See table/takeaway information
- Update order status

---

3. Functional Requirements

3.1 Login and User Management

FR-01: Login

The system shall allow authorized users to log in using:

- Username/email
- Password

FR-02: User Roles

The system shall support basic roles:

- Admin
- Cashier
- Kitchen Staff

FR-03: Logout

Users shall be able to securely log out from the system.

---

4. Menu Management

The Menu Management module will manage the restaurant's food and beverage items.

4.1 Category Management

The Admin shall be able to:

- Add category
- Edit category
- Delete category
- View categories

Examples:

- Rice
- Biriyani
- Burger
- Pizza
- Chicken
- Drinks

- Desserts

FR-04: Add Category

The Admin shall be able to create a category with:

- Category name
- Description (optional)
- Status

FR-05: Edit/Delete Category

The Admin shall be able to modify or remove an existing category.

4.2 Food Item Management

FR-06: Add Food Item

The Admin shall be able to add a food item with:

- Item name
- Category
- Price
- Stock status
- Description (optional)

Example:

Item	Category	Price	Stock
Chicken Biryani	Biriyani	৳180	Available
Beef Burger	Burger	৳220	Available
Cold Coffee	Drinks	৳120	Out of Stock

FR-07: Edit Food Item

Admin shall be able to edit:

- Item name
- Category
- Price
- Stock status
- Description

FR-08: Stock Status

Each food item shall have a simple availability status:

- Available
- Out of Stock

When an item is out of stock, the cashier should not be able to add it to a new order.

This is **stock status**, not full inventory management. The first version does not need automatic ingredient-level stock calculation.

---

5. Table Management

The restaurant shall be able to manage its tables.

FR-09: Table Management

Admin shall be able to:

- Add table
- Edit table
- Delete table
- Set table number/name
- Set table status

Example:

Table	Status
Table 01	Available
Table 02	Occupied
Table 03	Available

Table Status

- Available
- Occupied

---

6. POS / Order Management

The POS will be the main module for creating restaurant orders.

6.1 Order Type

The cashier shall be able to select the order type:

- Dine-in
- Takeaway

For dine-in orders, a table must be selected.

For takeaway orders, no table is required.

FR-10: Create Order

Cashier shall be able to create a new order.

Order information:

- Order number
- Order type
- Table number, if dine-in
- Date/time
- Ordered items
- Quantity
- Price
- Subtotal
- Discount
- VAT
- Grand total
- Payment method
- Payment status

---

7. Item Selection

FR-11: Select Food Item

Cashier shall be able to select food items from the available menu.

The POS should display:

- Category

- Food item
- Price
- Availability

FR-12: Add Quantity

Cashier shall be able to:

- Increase quantity
- Decrease quantity
- Remove item

Example:

```
Chicken Biryani     ৳180 × 2 = ৳360
Cold Coffee         ৳120 × 1 = ৳120
---------------------------------
Subtotal                     ৳480
```

---

8. Billing

The system shall automatically calculate the bill.

FR-13: Subtotal

The system shall calculate:

Subtotal = Sum of item prices × quantities

FR-14: Discount

The cashier shall be able to apply a discount at the end of the bill.

The discount may be entered as:

- Fixed amount
- Percentage

Example:

```
Subtotal:       ৳1,000
Discount:          ৳100
```

FR-15: VAT

The cashier shall be able to apply VAT to the bill.

The VAT rate should be configurable by the Admin rather than hard-coded.

Example:

```
Subtotal:        ৳1,000
Discount:          ৳100
VAT:               ৳135
------------------------
Grand Total:     ৳1,035
```

FR-16: Grand Total

The system shall automatically calculate:

Grand Total = Subtotal - Discount + VAT

---

9. Payment

FR-17: Payment Method

The cashier shall be able to select:

- Cash
- bKash
- Nagad
- Card

FR-18: Receive Payment

The system shall record:

- Total bill
- Payment method
- Amount received
- Change amount, for cash payments
- Payment status

For example:

```
Bill:              ৳850
Cash Received:   ৳1,000
```

```
Change:            ৳150
```

FR-19: Payment Status

The system shall maintain:

- Paid
- Unpaid

A completed restaurant order should normally be marked as **Paid** before being closed.

---

10. Bill Printing

FR-20: Print Bill

After payment confirmation, the cashier shall be able to print the customer bill.

The printed bill should contain:

```
Restaurant Name
Address / Phone

Order No: 000125
Date: 29-09-2026
Type: Dine-in
Table: 05

Chicken Biryani    2 × 180    360
Cold Coffee        1 × 120    120
--------------------------------
Subtotal                      480
Discount                       50
VAT                            65
--------------------------------
Grand Total                   495

Payment: Cash

Thank You
```

The system should support a normal POS/thermal printer.

---

11. Kitchen Order Management

The Kitchen module will receive confirmed orders from the POS.

FR-21: Send Order to Kitchen

When the cashier confirms an order, the system shall send the order to the kitchen.

FR-22: Kitchen Notification

The kitchen screen shall show a notification for a new order.

Example:

```
NEW ORDER #000125

Table: 05

Chicken Biryani      × 2
Cold Coffee          × 1

Time: 12:35 PM
```

FR-23: Kitchen Order Status

Kitchen staff shall be able to update the order status:

- New
- Preparing
- Ready
- Completed

For a very simple first version, you could even use only:

Pending → Preparing → Ready

---

12. Sales Management

The system shall store completed sales.

FR-24: Sales Record

Every completed order shall be recorded with:

- Order number
- Date

- Time
- Order type
- Table number
- Items
- Total amount
- Discount
- VAT
- Payment method

FR-25: Daily Sales

Admin shall be able to view the total sales for a selected day.

Example:

```
Daily Sales Report
Date: 29 September 2026

Cash Sales       ৳18,500
bKash Sales       ৳6,200
Nagad Sales       ৳2,800
Card Sales        ৳7,500
-------------------------------
Total Sales      ৳35,000
```

---

13. Purchase Management

The restaurant needs to record money spent on purchasing food ingredients and other materials.

FR-26: Add Purchase

Admin shall be able to record:

- Purchase date
- Supplier name
- Purchase description
- Amount
- Payment method
- Note

Example:

```
Date: 29-09-2026
Supplier: Rahman Food Supply
Description: Chicken and rice
Amount: ৳8,500
```

```
Payment: Cash
```

FR-27: Purchase History

Admin shall be able to view previous purchases.

---

14. Expense Management

Purchases and general business expenses should be recorded separately.

FR-28: Add Expense

Admin shall be able to record:

- Expense date
- Expense category
- Description
- Amount
- Payment method
- Note

Possible categories:

- Electricity
- Gas
- Water
- Salary
- Rent
- Transportation
- Maintenance
- Other

Example:

```
Electricity     ৳3,500
Gas             ৳2,000
Rent           ৳15,000
Other           ৳1,500
```

---

15. Daily Cash Report

The system shall provide a daily cash report.

FR-29: Daily Cash Report

The report should show:

- Opening cash, if used
- Cash sales
- Cash purchases
- Cash expenses
- Cash received/paid
- Closing cash

Example:

```
Daily Cash Report
29 September 2026

Cash Sales              ৳18,500

Cash Purchase            ৳8,500
Cash Expenses            ৳3,000

Expected Cash            ৳7,000
```

For the first version, you can keep this calculation simple.

---

16. Sales and Profit/Loss Report

FR-30: Sales Report

Admin shall be able to view sales by:

- Today
- Selected date

The report should show:

- Total sales
- Total discount
- Total VAT
- Payment method breakdown

FR-31: Profit/Loss Report

The system shall calculate a basic net profit/loss.

A simple calculation can be:

Net Profit/Loss = Total Sales - Total Purchases - Total Expenses

Example:

```
Total Sales             ৳100,000
Total Purchases          ৳45,000
Total Expenses           ৳20,000
---------------------------------
Net Profit               ৳35,000
```

If the result is negative, the system should display it as a loss.

---

17. Dashboard

The Admin dashboard should remain simple.

It can display:

```
Today's Sales       ৳35,000
Today's Orders           86
Cash Sales           ৳18,500
Today's Expenses      ৳5,500
Net Result           ৳29,500
```

It can also show:

- Pending kitchen orders
- Today's order count
- Available/out-of-stock items

No advanced charts are necessary for the first version.

---

18. Basic Non-Functional Requirements

18.1 Usability

The system should have a simple interface that a restaurant cashier can learn quickly.

The POS should require as few steps as possible to complete an order.

18.2 Performance

Normal operations such as:

- Opening POS
- Adding items
- Creating orders
- Completing payments
- Viewing reports

should respond quickly under normal restaurant usage.

18.3 Security

The system shall:

- Require login
- Restrict features according to user role
- Protect user passwords
- Prevent unauthorized access to sales and financial information

18.4 Data Backup

The system should allow restaurant data to be backed up so that sales and order records are not easily lost.

---

19. Basic Database Entities

For development, the initial database can be kept relatively small.

```
Users
 ├── id
 ├── name
 ├── username
 ├── password
 └── role

Categories
 ├── id
 ├── name
 └── status
```

```
MenuItems
 ├── id
 ├── category_id
 ├── name
 ├── price
 ├── stock_status
 └── description

Tables
 ├── id
 ├── table_number
 └── status

Orders
 ├── id
 ├── order_number
 ├── order_type
 ├── table_id
 ├── subtotal
 ├── discount
 ├── vat
 ├── total
 ├── payment_method
 ├── payment_status
 └── created_at

OrderItems
 ├── id
 ├── order_id
 ├── menu_item_id
 ├── quantity
 ├── price
 └── subtotal

KitchenOrders
 ├── id
 ├── order_id
 └── status

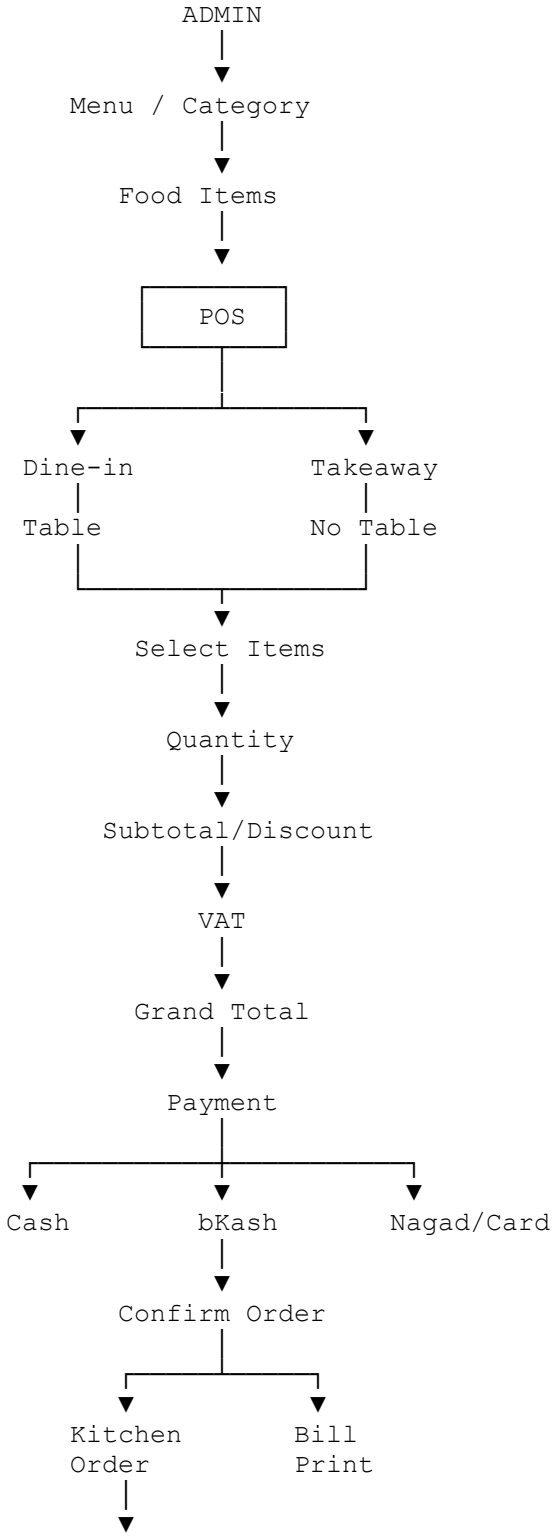

Purchases
 ├── id
 ├── supplier

 ├── amount
 ├── payment_method
 └── date

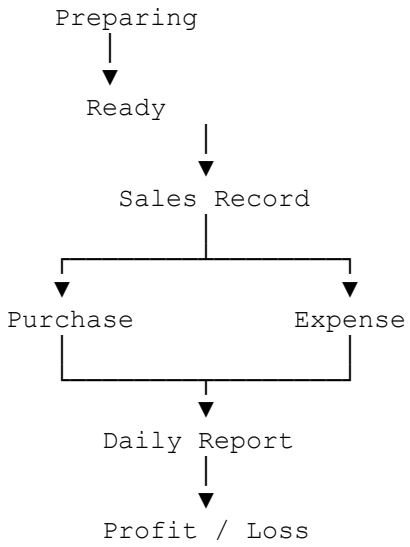

Expenses
 ├── id
 ├── category
 ├── description
 ├── amount
 ├── payment_method
 └── date
```

---

20. Main System Workflow

The whole system can follow this simple workflow:

The resulting MVP is essentially:

Menu Management + Table/Takeaway POS + Kitchen Orders + Payment/Printing + Sales + Purchase + Expense + Profit/Loss.
